COUNTERTOP GUIDELINES

Whether choosing for your kitchen or your bathroom it is important to have as many colors related to the room as possible. We also need you to bring in a piece of flooring, a door from your cabinets and paint sample, if possible.

Some companies will tell you that you need to pick your flooring first or your countertop first before choosing the floor. In our experience, when choosing the countertop we can work either way. We will try to help you choose colors in the proper color tone. We don't care how many times you come back to take samples home, we want you to be happy with the end result.

We encourage you to bring in 4-5 flooring samples that you like along with a door. From there we can help you narrow down the choices. We will send you home with large countertop samples so you can see them in your own kitchen.

Lighting can play a big factor with colors. So it is important that you take samples home to see that they look good in your lighting.
