KITCHEN INSTALLATION PROCEDURES

What do I need to do for my new kitchen?

- Remove all cabinets and appliances from the existing kitchen. This will ensure the installer has ample space to work. Rogan Kitchens will provide a tear out service that will be added on to the price of installation.
- If any plumbing or electrical work is required please ensure it is completed before the installation of the kitchen. All exposed wiring must be capped and in its appropriate place. If you require the services of an electrician or plumber we can provide you with contact information for licensed contractors. We also will make available floor plans of your kitchen for any subcontractor.
- Any new floor installations should be completed prior to install of the kitchen. If you are adding flooring after the kitchen installation it may require additional charges to the install price.
- Clear access to the home and kitchen for delivery purposes would be greatly appreciated.

We appreciate your cooperation in these areas as it will ensure a fast and efficient installation process.
